

Protocol Analyzer

Bring clarity to the total cost of cancer care

Protocol Analyzer helps practices better manage their oncology drug spend and optimize their reimbursements. By providing robust drug and protocol economic modeling, practices can quickly and accurately determine the total cost of care. In addition, Protocol Analyzer allows the practice to create a printable estimate for cost of therapy, which can be used to support financial counseling between the patient advocate and the patient.

Disclaimer: This is an economic modeling tool and treatment decisions must be based on clinical judgment only.

Key functionality

- View **evidenced-based treatment protocols** with compendia from NCCN and Clinical Pharmacology, CMS ASP, and physician fee schedules
- Create **customized protocols** directly from the analytics tab saving you time
- Analyze **economics of protocols** using sequestration and during sequestration holds and private payer fee information, even for newly released medications without J-Codes
- Compare **reimbursement by payer** for clinically equivalent drugs
- Print **patient financial estimates** with protocol descriptions and copay estimates for the patient by any payer source. This includes any additional costs required of OCM practices above and beyond the protocol itself.
- Create **practice-specific protocols** to make searches and comparisons even faster
- View **economics reports** using real-time pricing from Oncology Supply including ASP trending, top 20/Bottom 20 drugs, and historical purchases

Features

- Drug cost analysis by dose, MBUs and orals
- Protocol cost analysis and details
- Customized Medicare patient financial estimate
