

CLINICAL QUALITY CONSULTING

Advanced Practice Provider Program

Enhance the care delivery model in your practice

An Advanced Practice Provider (APP) program can assist in maximizing both quality and productivity within your practice and help close the gap on the demand for enhanced oncology services such as access to care, patient engagement and advance care planning.

The addition of an APP program into your practice's team-based care delivery model will help balance the demands for physician time while providing patient-centered care. Our clinical quality consultants have the expertise to assist you in navigating the complexities and identifying opportunities an APP program can provide.

Areas of Expertise

- **Advanced Practice Provider 360° Practice Assessment**
 - Tailored APP program that provides your practice with APP workflow feedback, recommends best practices and identifies opportunities for improvement
 - Review current roles within your practice and provide guidance to potentially implement an APP program
 - Utilize an ROI tool to guide decision making for implementation of new APP-led services
 - Assist you in evaluating additional provider need based on current clinical workflow
 - If an APP program currently exists, evaluate the current APP practice model for additional opportunities for improvement
- **Advanced Practice Provider Implementation Plan**
 - Provide support, resources and tools to aid in the onboarding and orientation of an APP program
 - Develop, implement and/or optimize standardized APP program practice model
 - Design and implementation of revenue enhancing APP-led services such as:
 - > Patient education
 - > Same day visits
 - > Survivorship
 - Assist in the development and deployment of a system for monitoring success of the APP program
