Analytics Insight for In-Office Dispensing Programs

Your oncology in-office dispensing program improves the patient experience and the practice's bottom line. Could it be doing more?

ION Solutions' Specialty Oncology Network (SON) members now have web-based access to the SON Dashboard, an innovative tool designed to give community oncologists the information they need to manage the operational flow of dispensing, adapt to dispensing trends and enhance patient care.

With the SON Dashboard you can:

- Determine high and low capture rates by prescriber and drug name
- Evaluate realized sales and missed opportunities
- Examine drug acquisition costs and expected payments by patients and payers
- View highest drug sales and associated margins
- Better understand prescription retention and growth (or loss)
- See dispense counts and sales totals by month, prescriber, drug class, payer type and payer

To learn how to add the SON Dashboard to your dispensing program, talk to your clinical practice consultant or email SON@iononline.com.

With the SON Dashboard, easily find answers to these important questions:

- What is my capture rate over time?
- What is the dispensing trend over time?
- What is my gross margin trend over time?

The SON Dashboard provides specific insights into oral dispensing performance, enabling you to quickly detect patterns and initiate action that can improve clinical operations and efficiencies.
