

IntelliDoseTxM

AmerisourceBergen

Automate Your Practice Workflow

Your oncology practice needs a robust solution that supports physicians, nursing, billing and administration. IntelliDoseTxM is a chemotherapy treatment management module that automates your oncology practice workflow while increasing patient safety and staff efficiency.

IntelliDoseTxM's key features include:

- Treatment plan management
- Computerized physician order entry (CPOE)
- Nurse charting
- Charge capture

Leverage Existing Technology

IntelliDoseTxM can interface with your electronic health record (EHR). Key clinical data flows from your EHR to IntelliDoseTxM, and encounter and treatment records pass back into your system. This ensures your oncology practice achieves optimal efficiency and has accurate data to manage your patients' chemotherapy treatments.

Three Main Components:

Orders module:

Order writing based on practice-defined treatment plan library

eNURSE module: A convenient point & click tool to document care

Charge capture module:

Automatically capture all charges for the chemotherapy encounter

Improve safety. Increase staff efficiency. Leverage existing technologies.

Schedule a demonstration to learn why IntelliDoseTxM is right for your practice. For more information, visit iononline.com or send an email to info@iononline.com.
